

SAM HOUSTON STATE UNIVERSITY
Department of Biological Sciences
2017-Fall Semester

COURSE SYLLABUS
BIOL 3450
Introductory Genetics (CRN 84291)
Credit Hours: 4

Instructor: Madhusudan Choudhary
Office: LDB 100A
Research lab: LDB 100
Office Hours: MTWRF: 8:00 AM-9:20 AM or by appointment
Phone: 936-294-4850
Email: mchoudhary@shsu.edu

Blackboard and Email: I will communicate with the class using email via Blackboard (BB). I want you to check your email regularly. Also, Syllabus, lecture power points, assignments, labs, and other information including announcements will be posted on the Blackboard.

Time & Location: Lecture BIOL 3450 08 (CRN 84291): Tuesday and Thursday, 08:00-09:20, LDB 208

Lab Sections:

BIOL 3450 09 (CRN 84292), Monday	05:00-07:00, LDB 130
BIOL 3450 10 (CRN 84293), Wednesday	05:00-07:00, LDB 130

Course Objectives: The primary objectives of this course are to provide:

- 1. Gaining a basic understanding of the subject (e.g., factual knowledge, methods, principles, generalizations, theories)**
- 2. Learning to analyze and critically evaluate ideas, arguments, and points of view**
- 3. Learning to apply course material (to improve thinking, problem solving, and decisions)**

Course Description: Genetics deals with the study of heredity and genetic variation. All organisms transmit their genes and inherited traits to offspring, resulting in the pattern of genetic inheritance that connects all life forms through time. With the discovery of Mendelian inheritance and the recent discovery of molecular biology in this century, our understanding of the mechanisms by which organisms organize, express, and pass genes to offspring has grown spectacular. In this course, we will examine different areas of Genetics: the central dogma of molecular genetics; molecular structure of DNA, RNA, and Proteins; molecular processes- replication, transcription, and translation; DNA recombination and repair, gene function, gene regulation, Microbial genetics- transformation, conjugation, and transduction; Mendelian laws of heredity and extension and modification of Mendelian laws; techniques of identifying genes of interest and of mapping those genes to chromosomes, chromosome structure; and genetics of some human diseases. We will also explore various genetic technologies, which impact medicine, agriculture, forensics, and basic research in biology, as well as highlight many ethical and societal challenges in applying these technologies to human.

Academic Community Engagement Activity: The course includes a portion of the Academic Community Engagement (ACE) activity. Students will form a team and choose genetic principles to connect with human genetic disease, outline genetic methods to diagnose and treatment for that specific disease. Each team will first discuss the topic with Instructor or

Teaching Assistant, and then prepare power point presentation, survey, chart or video games. Students will contact appropriate avenue in Huntsville community, where they will present their activities. These avenues include students' club, high school, middle school, University departments, Huntsville Library or students' dormitory. At the end of the presentation, students will collect responses from the attendees and write a two page report on the impacts and reflections of their activities. A maximum 50 points of the total 550 points can be scored on this portion of the course.

Prerequisites: Minimum grade of C in BIOL 1311/1111, BIOL 1313/1113, BIOL 2440, CHEM 1311/1111, 1312/1112

Text Book: *iGenetics: A Molecular Approach*. Peter J. Russell. ISBN: 978-0-321-56976-9; 3rd Edition

Reading assignments will be posted to Blackboard as well as presented in class. Anything in the assigned reading is fair game on exams. This textbook comes with access to additional online exercises and tutorials that will be useful for understanding basic concepts (www.geneticsplace.com). Up to 5 lectures can be posted on the blackboard, and these lectures are either replacement for the classroom lectures or additional lectures that I may not be able to cover in the class.

Lab Manual: Genetics lab manual will be purchased at Eagle Graphics.

Attendance: Class attendance is mandatory for this course. Also, students are expected to arrive in the class at right time, since late entry interrupts the class. The University requires that roll be taken.

Make-up exam or assignment policy: Make-up exams will not be offered, however your grade for the missing exam will be proportionately adjusted based on the final exam (that is cumulative). Make every effort not to miss an exam. Exam format will include both multiple choice and short answer questions.

Bring a Scantron 882-E form and number-two pencils to each exam.

I will assign homework as needed. Not all homework will be turned in for credit, and no homework assignment will be worth more than 10 points. Homework assignments will consist of problems that you are likely to see on exams, and therefore it helps you to do them and have them ready to discuss or turn in. Only hard copies of homework assignments will be accepted. I will allow homework to be made up if provided with an appropriate documentation of the excuse, or if given advanced warning that the class will be missed.

Grading: Grades will be determined from the following activities including final exam (all cumulative).

First Lecture Exam:	September 28*	50 pts
Second Lecture Exam:	October 31*	50 pts
Third Lecture Exam:	November 28*	50 pts
Home-Class Activities		80 pts
Attendance		20 pts
Lab Poster/Lab Report		80 pts
Pre-lab and post labs		60 pts
Lab notebook		10 pts
Academic Community Engagement Project		50 pts
Final Exam: December 5		100 pts

Total	550 pts
--------------	----------------

*Tentative dates are subject to change.

Grades will be assigned as follows: 90-100% = A, 80-89% = B, 70-79% = C, 60-69% = D, < 60% = F. A curve will only be applied if the class average is well below a "C". No grade will be decreased due to any curve.

Laboratory: Labs will meet in LDB 130. Lab will begin on **September 4-7** at which point you will receive a syllabus for the laboratory. The last lab will meet on **November 28 and November 27-30**. Laboratory attendance is mandatory.

Holidays/Important Dates:

August 24: Class begins

August 28- September 1: Closed due to Harvey

September 4: Labor Day

September 8: Last day to drop without a "Q" and receive 100% refund.

November 17: Last Day to drop with a "Q" Grade

November 22-24: Thanksgiving Holiday

December 1: Last day of Instruction

December 5: Final Examination: 10 AM-12 PM

Academic Honesty:

All students are expected to engage in all academic pursuits in a manner that is above reproach. Students are expected to maintain complete honesty and integrity in the academic experiences both in and out of the classroom. Any student found guilty of dishonesty in any phase of academic work will be subject to disciplinary action. The university and its official representatives may initiate disciplinary proceedings against a student accused of any form of academic dishonesty including, but not limited to, cheating on an examination or other academic work which is to be submitted, plagiarism, collusion and the abuse of resource materials.

Visitors in the classroom:

Only registered students may attend class. Exceptions can be made on a case-by-case basis by the professor. In all cases, visitors must not present a disruption to the class by their attendance. Students wishing to audit a class must apply to do so through the Registrar's Office.

Students with Disabilities:

It is the policy of the university that no otherwise qualified disabled student shall, solely by reason of his/her handicap, be excluded from participation in, or denied benefits of, or is subject to discrimination under any academic or Student Life program or activity. Disabled students may request help with academically related problems stemming from individual disabilities by contacting their instructor, school/department chair, or by contacting the university Chair of the Committee for Continuing Assistance for Disabled Students/ Director of Counseling Center (located in Lee Drain Annex, phone 936-294-1720).

A student with a disability is encouraged to register with the university Counseling Center, as well as contacting their instructor about assistance needs. Accommodation cannot be made until the student has initiated the request with the Counseling Center. Every semester that the student desires accommodations, it is the student's responsibility to complete a Classroom Accommodation Request Form at the Counseling Center and follow the stated procedure in notifying faculty. Accommodations for disabled students are decided upon documentation and need on a case-by-case basis by the Counseling Center. All requests are handled with confidentiality according to university procedures. **Any student with a disability that affects his/her academic performance should contact the Office of Services for Students with Disabilities in the SHSU Lee Drain Annex (telephone 936-294-3512, TDD 936-294-3786) to request accommodations.**

Religious Holy Days Policy:

Section 51.911(b) of the Texas Education Code requires that the university excuse a student from attending classes or other required activities, including examinations, for the observance of a religious holy day, including travel for that purpose. A student whose absence is excused under this subsection may not be penalized for that absence and shall be allowed to take an examination or complete an assignment from which the student is excused within a reasonable time after the absence.

University Policy 861001 provides procedures to be followed by the student and instructor. A student desiring to absent himself/herself from a scheduled class in order to observe (a) religious holy day(s) shall present to each instructor involved a written statement concerning the religious holy day(s). This request must be made in the first 15 days of the semester or the first 7 days of a summer session in which the absence(s) will occur. The instructor will complete a form notifying the student of a reasonable timeframe in which the missed assignments and/or examinations are to be completed.

Tentative Class Schedule and Topics

Date	Lecture	Topic
August 24	1	Course Introduction/Syllabus
September 5	2	Introduction to Genetics
September 7	3	DNA-The Genetic Material
September 12	4	DNA-The Genetic Material
September 14	5	DNA Replication
September 19	6	DNA Replication
September 21	7	Gene Functions
September 26	8	Gene Functions
September 28	First Exam	
October 3	9	Gene Expression-Transcription
October 5	10	Gene Expression-Transcription
October 10	11	Gene Expression-Translation
October 12	12	Gene Expression-Translation
October 17	13	DNA Mutation, DNA Repair, and Transposons
October 19	14	DNA Mutation, DNA Repair, and Transposons
October 24	15	Biotechnology-Gene Cloning and Sequencing
October 26	16	Biotechnology-Gene Cloning and Sequencing
October 31	Second Exam	
November 2	17	Mendelian Genetics
November 7	18	Chromosomal Basis of Inheritance
November 9	19	Extension of Mendelian Genetic Principles
November 14	20	Variation in Chromosome Structure and Number
November 16	21	Variation in Chromosome Structure and Ploidy
November 21	22	Genetics of Bacteria and Bacteriophages
November 28	24	Regulation of Gene Expression
November 30	Third Exam	
December 1	Review
