Lab is not "Show and tell". You are required <u>to prepare,</u> <u>participate, perform</u> <u>and retain</u>.

Prerequisites:

Completion of CHM 1412 with a grade of C or higher and concurrent enrollment in CHM 2323 or prior completion of CHM 2323 with a grade of C or higher.

Required Texts:

(1) CHM 2123 Laboratory Manual,

- (2)_"The Organic Chem Lab Survival Manual" by Zubrick (any edition) and
- (3) Your Organic Chemistry Lecture Text.

Required Supplies:

- (1) Laboratory Research Notebook with duplicating pages.
- (2) DEPARTMENT APPROVED SAFETY GOGGLES (Safety glasses are NOT acceptable)
- (3) Black or blue non-erasable pen for writing in notebook.
- (4) A small container of a good grease-cutting dish-soap.

Strongly Suggested Supplies:

(1) neoprene gloves to protect hands.

(2) a black "SHARPIE" marker to label your glass while in use.

(3) Lab coat, to protect body and clothing.

Non-erasable pens (**<u>BLUE or BLACK ONLY</u>**) must be used for all laboratory work entries. Pencil or white-out are not acceptable and a minimum of 20% will be deducted from each laboratory for which they are used. Erasures will also cost an additional 20% of possible points for that experiment.

Important NOTICE!!!

Organic Chemistry Lab requires attendance of a Pre-Lab on Monday afternoon:

Sect: 11, 12, 13, 14, 15 Sect: 21, 22, 23, 24, 25 Monday 1:00-1:50 PM Monday 3:00-3:50 PM

In this Pre-Lab session, the laboratory quiz will be given, and the laboratory preparation and instructions for the next experiment will be given. If you do not attend the Pre-lab for which you are scheduled, you will receive a zero for the lab quiz portion of the experiment.

Cell Phones must be turn off during the Pre-Lab Lecture and the Laboratory and may not be used in the lab. If

your cell goes off in class, you <u>will</u> be ejected from the classroom. No ear mounted phones or ear phones (I-pods) are allowed in class. You are not allowed to use cell-phones or computers during laboratory. If you are caught using any electronic device (except calculator) during lab you will be ejected, your experiment shut down, and you receive a zero for that lab's grade. YOU MAY NOT USE YOUR CELL PHONE AS A CALCULATOR IN LAB OR LECTURE!!!!!!!!

NO use of <u>any</u> electronic devices is allowed during lab without the written documentation from the Office of Student with Disabilities.

Acceptable Attire:

In the laboratory shorts, exposed mid-rifts, and open-toed shoes are unacceptable and will not be allowed. Long hair must be tied back and loose flowing clothing is highly discouraged. These are your safety and not for your convenience. We are thinking of your safety even if you are not. <u>Disfigurement</u> and possibly death are not fashion statements you want to make.

Attendance:

Attendance is required at each scheduled laboratory Pre-lab and Lab session since each experiment will only be performed during the week it is scheduled and cannot be made-up. However, life is not always flexible so the lowest lab grade will be replaced by the percentage grade on the Laboratory Final. If you miss a lab session that will be the one replaced by the percentage grade on the Laboratory Final. Additional missed laboratory sessions will be recorded as zeros. Late work will not <u>be accepted</u> and the grade for that lab work will be a zero.

Check-In & Check-Out:

At the first scheduled meeting of the in-laboratory class, each student will be assigned a lab cabinet and drawer containing equipment to perform the experiments scheduled for the semester. During this time make sure to examine each piece of glassware for chips, cracks, and breaks for your own safety and so that you will not be charged to replace it later. Make a note of any missing equipment on the check-in sheet provided in the Lab manual.

After you have "checked-in", you are responsible for the equipment in your cabinet, so do not leave it unlocked as one can rarely assume their neighbors are as conscientious as they are.

If you decide to drop the lab, resign from the University, or finish the course after you have checked-in then you must "check-out" with your TA. During "check-out" the cabinet is inventoried against the "check-in" sheet. If you do not "check-out", the TA will check-out the cabinet and you will be charged a \$25 Check-out Fee plus the cost of any missing or damaged items that were placed in your care.

Before Coming to Pre-Lab on Mondays:

- 1. View and take notes from the PowerPoint for the experiment to be performed that week (if one is scheduled).
- 2. Read the relevant sections of the Zubrick book covering the techniques involved in the experiment (extraction, reflux, distillation, etc.).
- 3. Review the PowerPoint(s) for the previous Lab(s).

- 4. Have your Spectral Problems Assignment completed.
- 5. Review the material from the Spectral Problems.
- 6. Make note of questions/problems with the Lab experiment.

In Pre-Lab:

Upcoming lab experiment will be discussed and outlined. Spectroscopy will be introduced and covered as part of every pre-lab lecture.

- 1. Spectral problem sets from the assigned sections of the lab manual will be taken up.
- 2. An overview of the week's experiment (if any) will been given.
- 3. An overview of the new assigned spectral problems will be given.
- 4. A quiz will be given that covers the previous experiment(s), the general details of the coming experiment, and the techniques/material covered in the experiments, spectroscopy, and lab safety.

Preparation for the Lab

Before coming to lab, you must prepare to perform the experiment, set up your lab notebook, and read and study any assigned or necessary materials.

- (1) Check schedule of experiments to find out which experiment is to be performed and any additional requirements.
- (2) Read the experimental description from the lab manual and any appropriate sections in the <u>Zubrick</u> book covering techniques to be used in the experiment.
- (3) Set up your lab notebook as described below. Experiment #1 does not need this step. NOTE: You will not be allowed to bring your lab manual to lab after Experiment #1. The only personal items allowed in the laboratory are your notebook, <u>Zubrick</u>, calculator, and blue/black nonerasable pen. If you bring your lap-top computer or other electronics to lab, you are responsible for them and their loss, damage, destruction, or theft are your responsibility alone.

In Lab:

- (1) Upon entering the lab,
 - a. Turn in the laboratory notebook copy sheets from your ante-lab write-up (discussed below) and
 - b. The completed laboratory copy sheets of your Postlab write-up (discussed below) from the previous week's lab.
- (2) Come to lab, ready to work. There is less than three hours available to work and no more. If you have not completed your work in the allotted time, the experiment will be shut down and points will be lost.
- (3) Perform your post-Lab write up in your notebook, see below.
- (4) Work safely.
- (5) As the experiment progresses, clean any used equipment and glassware before putting it away in your drawers. Clean as you go, do not put it off until the end. NEVER PUT DIRTY GLASSWARE AWAY. Make sure all of your equipment is put away before leaving. Any equipment left out in the laboratory will be returned to the

stockroom for redistribution and you will be charged for any missing equipment at the end of the semester. 10% for each piece of glassware left out will be deducted from the grade for the lab experiment being conducted

Schedule of Experiments:

Pre-Lab	Lab week	Experiment #	Pre-Lab Topic and Assignments	
Jan 22: Pre- lab Only			Overview of Lab requirements and Expectations, Begin Mass Spectrometry Sections 1&2. (Begin reading Chapter 16 in Karty)	
Jan 29: Pre- lab only			 Check-in, Molecular Models and MS Section 3 and IR Section 1 Turn in Spectral Problems MS 1&2 Turn Syllabi Signed Sheet. 	
Feb 5:	Feb 5 - 9:	Building molecules: using molecular model kits, build 3D structures from the 2D depictions of Lewis, condensed, and line- angle formulas, observe rotation of single bonds, inversion of rings, chirality, etc.	 Check-in, Acid-Base Extractions and IR Section 2 & 3 Turn in Spectral Problems MS 3 & IR 1 Begin reading Karty Chap 15. 	
Feb 12:	Feb 12 - 16:	Acid-Base Extraction Read Sections of Zubrick covering Extractions + Explores the use of acid-base properties of solutes in order to control water solubility by conversion to the charged conjugate acid or base. Used to separate a mixture of organic compounds.	 Recrystallization Experiment IR Sections 4 & 5 Turn in Spectral Problems IR 2 &3 	
Feb 19:	Feb 19 - 23:	Recrystallization and melting	1. Distillation & &	

		point determination: Read Sections of Zubrick covering Recrystallization. Recrystallization as a purification method, selection of appropriate solvent, steps and techniques including fluted-paper filtration, vacuum filtration, melting point determination and percent recovery calculation.	 2. Nuclear Magnetic Resonance (NMR) Sections 1 & 2 3. Turn in Spectral Problems IR 4 &5
Feb 26:	Feb 26 - Mar 2:	Distillation: Read Sections of Zubrick covering Distillation, theory, simple and fractional distillation	 Preparation of 2-Chloro-2- methylpropane NMR Sections 3&4 Turn in Spectral Problems NMR 1 &2
Mar 5:	Mar 5 - 9:	Preparation of 2-Chloro-2- methylpropane: Preparation, characterization, and wet tests for alkyl halides.	 Dehydration of Cyclohexanol & NMR Sections 5 & 6 Turn in Spectral Problems NMR 3 &4
Mar 12:	Mar 12 - 16:	Spring break	
Mar 19:	Mar 19 - 23:	Dehydration of Cyclohexanol: Application of distillation to push a reaction to completion and purify the expected product. Tests for unsaturation (Baeyer test, Br ₂ , Chromic Acid)	 NMR Section 7 Turn in Spectral Problems NMR 5 & 6 More spectral problems.
Mar 26: Pre-lab only	Mar 26 - 30:	Religious Holiday	 Obtaining an NMR Spectrum & Spectroscopy Problems Turn in Spectral Problems NMR 7.
Apr 2:	Apr 2 - 6:	Obtaining an NMR Spectrum Blackboard Handout: Each student will actually obtain an NMR spectrum of an unknown sample.	 Preparation of an Alkyl Acetate & Spectroscopy problems. Turn in Spectral Problems.
Apr 9:	Apr 9 - 13:	Preparation of an alkyl acetate	1. Synthesis and Purification

		+ Read section of Zubrick covering reflux of reactions. Uses a simple reaction to introduce the use of the reflux technique and the application of extraction to the work-up of a reaction mixture to isolate the desired product.	of Aspirin 2. Spectroscopy problems. 3. Turn in Spectral Problems.
Apr 16:	Apr 16 - 20:	Synthesis and Purification of Aspirin : Use of reflux to prepare a solid. Recrystallization and extraction for purification. Acidity of carboxylic acids and phenols and FeCl ₃ test for phenols	
Apr 23:	Apr 23 - 27:		Clean-up & Check-out, Written Lab Final during regular lab time

Notebooks:

Lab Prep Write-Up:

Except for Experiment #1. Prior to coming to the lab, the notebook must be prepared for conducting the experiment as outlined below. This is necessary, because you will not be allowed to bring the lab manual into the laboratory. You must perform the experiment using only your notebook and any additional instructions given in the pre-lab.

- I. First Page of Notebook with Name and Table of Contents.
 - a. Name and ID # at the Top.
 - b. Table of Contents to show |Page | Experiment Title |
- **II.** For each Experiment
 - a. Title
 - b. A one or two sentence summary of the Experiment.
 - c. If a reaction is to be performed, the reaction should be shown using complete structural formulas.
 - d. Reagent table as follows: should include all reagents used in the experiment, MSDS sheets and chemical supply catalogs will available in the laboratory for gathering information needed. It is best to look up the information the week before.

sodium hydroxide	NaOH	40.0	5.0 g	125	Caustic, strong base

e. Outline of experimental procedure with sufficient detail to actually perform the experiment. This is very important since the lab manual is not allowed in the laboratory.

PostLab Write-up: In the Laboratory

a. Describe your actual procedure. The true amounts of materials weighed out and equipment used. Include any observations such as temperature or color changes. For example:

"I weighed out 4.98 g of NaOH pellets and placed them into a 100 mL singleneck boiling flask. Two boiling chips were added to the flask with 25 mL of water. The dissolved NaOH was very warm, ...

b. Calculation of percentage yield (if you don't remember how, find it in your freshman text, Chap 3 or 4).

c. Discussion & Conclusion: Write your interpretation of the observations and results obtained during the laboratory. Why was the yield good or bad? Was the results what you expected? Et cetera.

d. Answers to questions for the experiment.

Grading: For each Lab, a grade will be computed as follows:

Molecular models Lab: successfully checking-in and performing experiment 1 Attendance x (checkin and Experiment 1) (0 or 1) x 10

All Other Experiments: Attendance x (Quiz(4pts) + Report(6pts)) = Grade (0 or 1) x (4+6) = max of 10

Spectroscopy Problem Sets: 10 points@.

The total of the labs make up 60% of lab grade.	60%
Spectroscopy Problem Sets	10%
Lab Final (comprehensive) will count 30%	<u>30%</u>
	100%

A≥90%, B≥80%, C≥70%, D≥60%, F≤59%

The report for each experiment will consist of the Laboratory notebook copy sheets of your labprep and post-lab write-ups with any additional questions from the experiment included in the notebook. The lab-pre write-up will be turned in at the beginning of the lab session for that experiment and the post-lab write-up will be turned after completion of the experiment at the beginning of the next lab experiment.

The final examination for the laboratory will be comprehensive and will focus on the experience of the laboratory. That is; how is this procedure done?; what should this result look like?; how do I set up this apparatus?; et al. Know your basic laboratory common sense. What were the tests performed in lab?, what reagents did they involve?, what were they testing for?, what was the reaction involved?, What does the test look like? What does a positive result for this or that test mean or look like? Fundamentals of spectroscopy? Remember to pay attention in the lab and record all of your observations in your notebook.

The Lab final will also include routine questions over MS, IR, and NMR spectroscopy with particular emphasis on the relationship of molecular structure to the spectral data. Also there will be <u>at least</u> three spectral problem sets.

Good-Luck.

<u>Treat your laboratory experience like your first romantic date with the</u> <u>person with whom you plan to spend the rest of your life</u>. Pay attention to what you are doing, why you are doing it, the chemistry involved, and not just worry about how soon can I get out of here.!! Focus on understanding what and why you are doing the procedures that you are performing and "what did they look like?". <u>The instructor like your life</u> <u>partner will expect you to remember every detail</u>.

Remember: If you do not know what you are going to do before you get to lab, you probably will not know what you did when you leave.

!!!!! PREGNANT STUDENTS: !!!!!

The health and safety of your baby/fetus <u>cannot</u> be guaranteed. Exposure to vapors and solutions in the lab <u>will</u> occur. For most of the experiments, an alternative with less volatile, less toxic, or less noxious reagents simply does not exist. Since the purpose of the lab is to learn to perform common critical laboratory techniques, there is no dry alternative. So you have a choice of options:

- 1. Continue on with the lab experience, accepting all responsibility/liability for any consequence.
- 2. Obtain neoprene lab gloves, full body lab suit, and a selfcontained respirator then continue with the lab.

- 3. Take an X for this semester and complete the lab work in the next long semester for an official grade. This is only viable if the baby will be delivered before the next semester.
- 4. Drop the lab for this semester and take it later.

STUDENTS WITH DISABILITIES POLICY:

It is the policy of Sam Houston State University that individuals otherwise qualified shall not be excluded, solely by reason of their disability, from participation in any academic program of the university. Further, they shall not be denied the benefits of these programs nor shall they be subjected to discrimination. Students with disabilities that might affect their academic performance should register with the Office of Services for Students with Disabilities located in the Lee Drain Annex (telephone 936-294-3512, TDD 936-294-3786, and e-mail <u>disability@shsu.edu</u>). They should then make arrangements with their individual instructors so that appropriate strategies can be considered and helpful procedures can be developed to ensure that participation and achievement opportunities are not impaired.

SHSU adheres to all applicable federal, state, and local laws, regulations, and guidelines with respect to providing reasonable accommodations for students with disabilities. If you have a disability that may affect adversely your work in this class, then I encourage you to register with the SHSU Services for Students with Disabilities and to talk with me about how I can best help you. All disclosures of disabilities will be kept strictly confidential. NOTE: No accommodation can be made until you register with the Services for Students with Disabilities. For a complete listing of the university policy, see:

http://www.shsu.edu/dept/academic-affairs/documents/aps/students/811006.pdf

Student Acknowledgement of Syllabus:

I, _____(your name) having SHSU ID# ______, have printed the syllabus for CHM 2123 (Spring 2018). I further acknowledge that I have read said syllabus and that I am familiar with its contents. I also recognize that my continuance in this course requires that I agree to its content and requirements and that changes to this syllabus are only possible if they further the aims of the course as deemed appropriate by the professor.

I am also aware that questions and/or problems with the course must be addressed to the instructor. If these problems are not part of the day's scheduled material, it should be addressed after class, during office hours, or by appointment.
