Sam Houston State University recognizes the value of undergraduate scholarship—both for our students and our faculty members. The term “scholarship” is meant in the largest possible sense, embracing all disciplines; at the same time, it is shorthand for a much broader world that encompasses all forms of creative activity, scholarship, application and discovery. It includes:

- research in the traditional sense (such as a team of scientists working in a laboratory or field setting)
- scholarly works in the humanities and social sciences and
- creative activities engaged in by artists and performers

“The ecology of the university depends on a deep and abiding understanding that inquiry, investigation, and discovery are the heart of the enterprise...Everyone at a university should be a discoverer, a learner. That shared mission binds together all that happens on a campus.”

Boyer Commission on Educating Undergraduates in a Research University, 1998
