Medicare Preparation for Employees (Link to Powerpoint Presentation)
Material **External Training**
(Not for credit) The Employees Retirement System of Texas (ERS) presentation is for employees who are close to age 65 or still working and are over age 65 and thinking about retirement. This presentation provides information about Medicare eligibility for the employee and/or eligible dependents... read more

Leadercast Women 2018
Event **External Training**
Women's leadership is more than important in today's world; it is imperative. The vision for the first-ever Leadercast Women one-day leadership event, developed by the same people behind the phenomenally successful Leadercast conference, is to create a positive, safe, comfortable, and collaborative... read more

BearkatBuy Online Curriculum
Curriculum **Sam Houston State University**
This curriculum will teach the basic operations and steps necessary to order and receive goods and services through the BearKatBuy system. After the training, users will be able to successfully navigate through the system order and receive their goods within the online system. BearKatBuy will be... read more

Be the One in the Fight Against Human Trafficking
Video **External Training**
This digital training tool from the Office of the Attorney General (OAG) uses actual cases prosecuted in our state to educate the audience about the realities of this criminal industry and equips viewers with the necessary tools to recognize red flags and respond appropriately. The film shows how... read more

C++ Standard Template Library Algorithms and Operations
Online Class **Skillsoft**
The C++ Standard Template Library is a set of template classes that let you easily implement common algorithms and data structures. Explore the Standard Library algorithms and operations, including sorting and merging.

Come for Coffee: Reclassifications and Market Studies
Event **SHSU Instructors**
A compensation and classification HR Specialist discusses the purpose of reclassifications and market studies, and provides important details about these processes. These include actions in PeopleAdmin, desk audits, market adjustments, and EPAFs.

Graduate And Student Hiring
Event **SHSU Instructors**
Come to this interactive lab training session with Human Resources to learn and have your questions answered about the graduate and student hiring process and submitting Electronic Personnel Action Forms (EPAFs). Credit=2 In session one, participants will learn about graduate hiring.In session two,... read more

Information Systems Security and Audit Professional

Online Class **Skillsoft**
Generally taken near the end of a program, Final Exam Information Systems Security and Audit Professional enables the learner to test their knowledge in a testing environment.

Complex TestNG Integrations and Implementations
Online Class **Skillsoft**
There are several build tools and automations that can be used to enhance and automate unit testing. In this course, you'll explore parallelism, logging, and reporting, including integrations with Apache Ant, Maven, Subversion, and Hudson.

Securing C/C++ Applications
Online Class **Skillsoft**
Discover how to protect your applications from attacks and bad data! This course shows you how to identify and defend your C/C++ applications from potential risks, and how to control user input to reduce the possibility of bad data entry.

Kotlin Objects and Classes
Online Class **Skillsoft**
Kotlin is an object-oriented programming language, so working with objects is an important part of mastering it. In this course, you'll learn about classes, visibility, extensions, and objects in Kotlin.

Kotlin Loops and Functions
Online Class **Skillsoft**
Kotlin uses many of the programming constructs that you'd find in other high-level programming languages. In this course, you'll explore type checking, loops, when statements, and the standard structures used for creating functions.

Kotlin Syntax
Online Class **Skillsoft**
While similar to Java, Kotlin's syntax is not compatible with the ubiquitous language. In this course, you'll learn about the basic syntax of Kotlin, including packages, types, variables, strings, and conditionals.

Kotlin IDEs
Online Class **Skillsoft**
When developing with Kotlin, there are several integrated development environments (IDEs) to choose from. In this course, you'll learn how to install a Kotlin development environment and create a basic Kotlin project.

Introduction to Kotlin
Online Class **Skillsoft**
Kotlin relies on the Java Class Library, and there are several integrated development environments (IDEs) to choose from for developing with Kotlin. In this course, you'll learn the basics of Kotlin and its tools.

Securing Your Microservices
Online Class **Skillsoft**
Every application needs security. In this course, you'll learn how to make sure that certain people can access your application and that you have control over what they can do.

Deploying Your Microservice in Containers
Online Class **Skillsoft**
In this course, we will explore containerizing and deploying your Microservice with Docker. This creates reliable and repeatable deployments.

Advanced Data Access with EF Core
Online Class **Skillsoft**
In this course, you'll explore the Entity Framework Core in depth, and learn how to add database connectivity to your .NET Core microservices.

Building a Microservice in .NET Core
Online Class **Skillsoft**
In this course, you will learn the fundamentals of building a REST Microservice in .NET Core, from designing the API to deploying it.

Building an API Project in ASP.NET

Online Class **Skillsoft**
In this course, you'll learn how to build a sample API project in ASP.NET using Web API, and how to create a fully functioning service from start to finish.

Getting Started with REST and .NET Core
Online Class **Skillsoft**
In this course, you will learn the basics of .NET Core and how to use it to create and test applications.

UI Patterns and Troubleshooting
Online Class **Skillsoft**
This course covers the importance of UI patterns and the various troubleshooting techniques that are being used with microservices.

Advanced Microservices Patterns
Online Class **Skillsoft**
This course covers the advanced microservices design patterns. You will learn to implement log aggregation, work with application metrics, deploy and audit logs. You will also learn to use APIs to check the health of microservices.

Advanced Microservices Architecture
Online Class **Skillsoft**
This course covers the advanced concepts of microservices architecture.

Securing Microservices
Online Class **Skillsoft**
In this course, you will learn about the concepts and tasks involved in securing microservices.

App-to-app Communication and File Storage
Online Class **Skillsoft**
Allowing apps to communicate with each other and store files makes it easy to expand their experience beyond the local view. In this course, you will learn how to make an app communicate with other apps and how to manage file storage.

App Navigation
Online Class **Skillsoft**
Navigation between different parts of an app is crucial for development. In this course, you will learn how to use several navigation patterns in a UWP app.

Angular and ngrx
Online Class **Skillsoft**
When building reactive applications, ngrx reduces complexity by providing a set of tools. In this course, you will learn about ngrx and its use in creating reactive applications with Angular.

Angular, Reactive, and Observable
Online Class **Skillsoft**
Reactive programming is a programing paradigm that helps build responsive, scalable, and resilient applications. In this course, you will learn about reactive programming and the RxJS component.

Kubernetes API and Components
Online Class **Skillsoft**
In this course, you will learn about the Kubernetes API and other key components of Kubernetes.

Kubernetes Clusters
Online Class **Skillsoft**
In this course, you will learn about Kubernetes clusters and how to use the kubectl command-line tool to create, start, stop, delete, and much more.

Python Data Processing
Online Class **Skillsoft**
Working with databases, regular expressions, and XML data are common tasks for DevOps in Python. This course demonstrates how to perform these common tasks.

Python Fundamentals
Online Class **Skillsoft**
The Python programming language, its syntax, and standard libraries, have undergone some changes between version 2 and 3. In this course, you'll learn about the key fundamental concepts and features of Python version 3.

Puppet Refactoring Patterns
Online Class **Skillsoft**
There are different ways to refactor Puppet configurations. In this course, you'll learn techniques to mitigate the risk and increase the success of Puppet configuration refactoring as it relates to the Puppet master and the Puppet agent.

Configuring Puppet Environments and Managing Files
Online Class **Skillsoft**
Puppet has robust file functionality and runs in multiple environments. In this course, you'll learn how to get Puppet to work with files and how to set up and configure multiple Puppet environments.

Configuring the Puppet Master and Puppet Agent
Online Class **Skillsoft**
Most of the functionality of Puppet is contained in the Puppet master and the Puppet agent. In this course, you'll learn how to configure Puppet for automated server configuration.

Building the Puppet Environment
Online Class **Skillsoft**
In this course, you will learn the basic concepts of automated configuration with Puppet. The installation and configuration of Puppet in the cloud will be covered. Puppet facts for advanced server configuration will be demonstrated.

Jenkins Administration
Online Class **Skillsoft**
In this course we will learn to setup and manage multiple nodes for optimal performance. This course covers the master and slave node setup, Jenkins best practices, deploying applications to the web server and automated release.

Testing and Continuous Integration
Online Class **Skillsoft**
In this course you will learn how to setup Jenkins to implement automated testing, publish reports and use the different tools to improve the quality of the codes

Creating Application Builds
Online Class **Skillsoft**
In this course, you will learn how to build jobs, manage source code, and incorporate advanced features of job and security implementations.

Jenkins 2 Nuts and Bolts
Online Class **Skillsoft**
In this course, we will introduce the concepts of Jenkins 2 and plugins that are enabled by default. We will learn how to set up a Jenkins environment, build jobs, and choose and use the right plugins.

Kibana and Reporting Capabilities
Online Class **Skillsoft**
In this course, you'll learn about the advanced capabilities of Kibana, with a focus on data discovery and management, machine learning concepts in ELK, plugin management, and reporting.

Visualization Using Kibana
Online Class **Skillsoft**
In this course, you'll learn how to implement the visualization capabilities of Kibana, with additional focus on dashboards and charting.

Elasticsearch Data Management
Online Class **Skillsoft**
In this course, you'll learn about Elasticsearch's data management capabilities, as well as how to use Elasticsearch indexes, shards, and filters to manage data.

Logstash for Data Ingestion in Elasticsearch

Online Class **Skillsoft**
In this course, you'll learn about Logstash and various other data ingestion techniques and how to use filtering and plugins to ingest data in Elasticsearch.

ELK Operations on the Cloud
Online Class **Skillsoft**
In this course, you'll learn how to set up various components to build scalable ELK Stacks for analytics and monitoring.

Test-driven Cookbooks
Online Class **Skillsoft**
The most important role of a Cookbook developer is to test a code before it enters production. This course will focus on testing Chef cookbooks consistently and effectively.

Community Cookbooks and Chef Server Patterns
Online Class **Skillsoft**
The best practices of using a Chef Server are directly related to the reusability of cookbook recipes and components. This course will focus on the effective use of community cookbooks with a Chef server.

Chef Server Basics
Online Class **Skillsoft**
Using a Chef server can accelerate the process of deploying cookbooks while providing visibility into the state of your infrastructure. This course will focus on Chef server policy and remotely deploying cookbooks.

First Steps with Chef
Online Class **Skillsoft**
How does expressing Infrastructure as Code with Chef accelerate building, deploying, and managing infrastructure? This course will focus on executing Chef code with the chef-client and introduces the DSL for writing recipes and cookbooks.

CISSP 2018: Security and Risk Management (Part 2)
Online Class **Skillsoft**
Explore the governance, compliance, and business continuity planning domain areas for the enterprise security practitioner and engineer.

CISSP 2018: Security and Risk Management (Part 1)
Online Class **Skillsoft**
Explore the domain areas concerning governance, compliance, and business continuity planning for the enterprise security practitioner and engineer.

ITIL ® Operational Support & Analysis
Online Class **Skillsoft**
Generally taken near the end of a program, Final Exam enables the learner to test their knowledge in a testing environment.

Windows 10 Fall Creators Update: Configuring Network & Share Settings
Online Class **Skillsoft**
Windows 10 lets you create a network with other computers to share folders and files. Discover how to create, configure, and manage a HomeGroup; share files and folders; and connect and configure a Wi-Fi connection.
